Description of Measured Specifications

Parameter	Description
VSWR	Voltage standing wave ratio, the impedance match to 50 Ω , the ideal value is 1:1.
Return Loss	Loss of signal power resulting from the reflection caused by discontinuity of transmission line.
Insertion Loss	The input power divided by sum of power at the Forward Coupled port & transmission port
Forward Coupled	The input power divided by the power at coupling port.
Transmission	The input power divided by the power at transmission port.
Directivity	The power at the Forward Coupled port divided by the power at the Reflected Coupled port

Test Method

1. Calibrating your vector network analyzer.
2. Connect the VNA 4 Port to DUT respectively.
3. Measure the data of Forward coupled through port 1 to port 4(S41).
4. Measure the data of transmission through port 1 to port 3(S31).
5. Measure the data of Reflected Coupled through port 1 to port 2(S21).
6. Measure the data of return loss port 1, port 3.
7. According to the above data to calculate insertion loss, directivity.

Note:

1. When calculating insertion loss at room temperature, coupling & transmission data both need remove demo board loss. Please see demo board loss data below the table :
